

The 'shelf' allows you to glue the carpet in place

The new EverEdge Atlas range is a galvanised steel edging system designed specifically for the artificial grass market.

EverEdge Atlas is a variation of our EverEdge Classic that comes in 1 metre lengths, made in 1.6mm thick galvanised steel with a heavy duty brown coating.

What makes Atlas unique is a 20mm wide shelf situated on one side of the edging strip to allow the artificial grass to be glued in place. This provides an accurate and easy fit solution for any installation.

The problem many companies face when installing artificial grass is that there is nothing available specifically for use with this market.

The advantages of EverEdge Atlas are that it will last as long if not longer than the turf and provides a professional, modern solution which can be easily curved and shaped to fit any project.

| Code | Edging (mm) | Thickness (mm) | Shelf height from top (mm) |
|--------|-------------|----------------|----------------------------|
| ATA110 | 75 | 1.6 | 10 |

Variants on the above can also be made. Please contact our team to discuss your specific requirements.

Galvanising Specification

EverEdge Atlas is manufactured to BS EN 10346-2009 with an average 20 micron zinc coating.

Typical Usage

- Parks
- Play areas
- Private gardens
- Maintenance free lawns
